

Threaded for enhanced fixation

The TRIGEN META-NAIL Tibial Nail is the latest addition to the TRIGEN family of intramedullary nails. With a full range of sizes, the Tibial Nail is a comprehensive approach to the treatment of tibial fractures. Enhanced fixation via threaded screw holes and polyethylene bushings offer better solutions for the fixation of complex fractures.

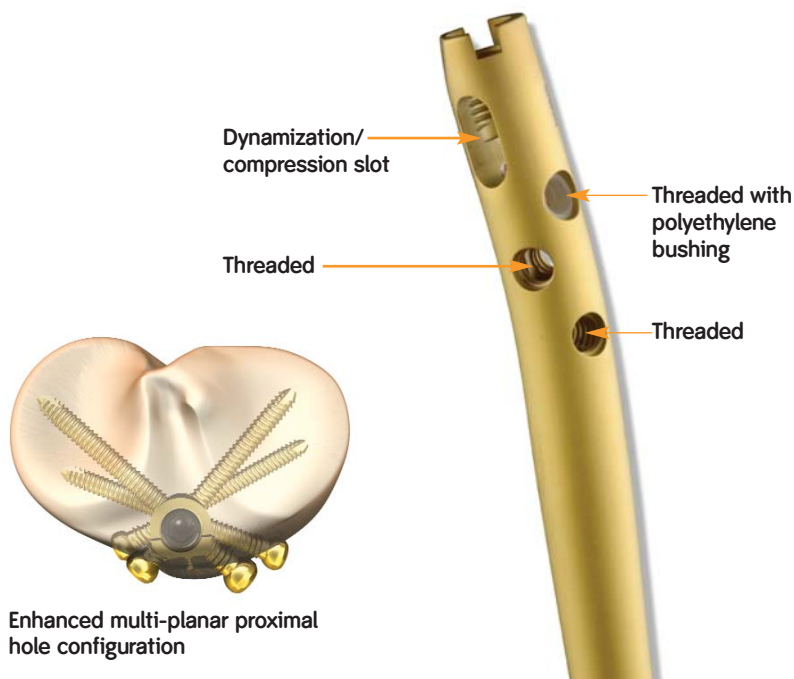

TRIGEN[◇] META-NAIL[◇] Tibial Nail System

Indications

The TRIGEN META-NAIL Tibial Nail is indicated for fractures of the proximal and distal third of the tibia, including the shaft, stable and unstable metaphyseal fractures, non-unions, mal-unions, and for the prophylactic nailing of impending pathological fractures.

Features

- Enhanced multi-planar proximal locking hole configuration for optimal fixation
- Threaded screw holes and polyethylene bushings enhance fixation and minimize post-operative fragment translation
- Full range of sizes and 1cm increments for a comprehensive and accurate approach to fracture fixation
- Internally threaded distal locking hole located 5mm from nail tip for enhanced fixation of extreme distal fractures
- 2° distal bend facilitates implant passage and fit within the distal tibia
- Nail cap locks most proximal screw for additional fixation
- Up to 7mm of active compression possible through proximal dynamization slot
- Proximally located 10° Herzog Bend eases implant insertion and minimizes fracture displacement during implantation
- Uses standard TRIGEN captured locking screws for system compatibility
- Titanium alloy for strength, flexibility and biocompatibility

Enhanced multi-planar proximal hole configuration
